NASA'S EDUCATION PROGRAM

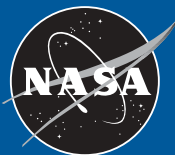

"To inspire the next generation of explorers . . . as only NASA can"

With a charter like no other, NASA has led some of the most unique missions in the world. From traveling to low-Earth orbit and walking on the Moon, to viewing the farthest reaches of our solar system, NASA has continually worked to share the discovery and adventure along the way. Each of these achievements is something that only NASA can do; therefore, NASA is striving to share these experiences with inquisitive minds in order to inspire and prepare them for future challenges.

NASA-sponsored education programs create a pipeline that engages students in the earliest grades (K-12) and encourages them to continue through college, graduate school, and postgraduate studies in science, mathematics, engineering, technology, and geography. These programs are structured so that NASA-related resources and technologies are incorporated as essential components in program development and implementation.

For more information on NASA educational resources, competitions, and scholarship and fellowship opportunities, visit the following Web site:
