Select the layer you would like to add a style to.

Select a layer by clicking on the layer.
Click on the "Styles Icon" at the bottom of the layer palette.
- Once you have selected a style the "Layer Style" will pop up to give you further choices to change the style.
- The style with a check in its box shows that this is the style that you will be using on your layer.
- You can also add more than just one style by checking the box next to the styles name and making any adjustments to that style.
Make adjustments to the style.

Make sure that the "Preview" box is checked. This way you will be able to see what your layer will look like before you add the adjustments.
Click on "OK" once you have made all adjustments and you are satisfied with what your layer will look like. Then click on "OK".
Notice that the layer style was only applied to the selected layer.

To hide a style.

To hide a style click on the "eye" icon below the layer and next to the word "Effects"
The style hidden.
To remove a style.

To remove a style reenter the "Layer Style" box and uncheck the style that you no longer want applied to the layer.
After you have removed the style click on "OK"
If you decide that you want to keep the style click on "Cancel"
