How to adjust the Hue, Saturation, and Lightness of a photo in Adobe Photoshop CS5

Subject Descriptors: Hue, Saturation, Lightness, Hue, Saturation, Colorize.
Application (Version): Adobe Photoshop CS5
Task Description: How do I adjust the Hue, Saturation, and Lightness of a photo?
Tutorial Date: 11 May 2009, by Arnousone Chanthalyxay. Updated 18 June 2010, Kasidy Stafford

Select image > Adjustments > Hue/Saturation
The Hue/Saturation Box will appear after selecting "Hue/Saturation"
Checking the "Preview" box will allow you to see all adjustments made to the photo before clicking on "okay"
1 - Adjusting the "Hue" will change the colors in your photo.
2 - When you adjust the "Hue" the rainbow bar at the bottom will change.
Adjust the "Saturation"

Adjusting the "Saturation" will allow you to intensify or bring down the colors in your photo.

Adjust the "Lightness"

Adjusting the "Lightness" will allow you to make the photo lighter or darker.
Once all adjustments are made click "okay"

Finished Result

This is the finished result of the photo.
By checking the "Colorize" checkbox, your photo will become one color and this allows you to make your entire photograph varying shades of one color.
